FOREWORD

This is the Crops Statistics of the Philippines, an annual publication of the Philippine Statistics Authority (PSA). This publication is the integration of two (2) previously existing PSA publications, namely, “Major Crops Statistics of the Philippines” and “Crops Statistics of the Philippines (National and Regional)”. This report presents annual statistics on production, area planted/harvested, and number of bearing trees/hills of 47 crops, with national and regional levels of disaggregation. A brief description and analysis of the trends of the statistics are also included in this publication. The reference period is from 2012 to 2016.

The crops covered in this publication are classified into four (4) commodity groupings, namely, Cereals, Fruit Crops, Non-Food and Industrial Crops, and Vegetables and Rootcrops. In the case of banana, mango, coffee, and tobacco, statistics are further disaggregated by major variety.

This report was prepared by the Crops Statistics Division (CSD) of the PSA. It serves as a ready reference for various stakeholders in the crops subsector of agriculture. The PSA continuously pursues the improvement of the delivery of its products and services. Comments and suggestions from the readers are welcome for further improvement of this publication.

Crops Statistics of the Philippines 2012 - 2016

44.1	Volume of Production for Sweet Potato/Camote, by Region: 2012-2016	105
44.2	Area Harvested for Sweet Potato/Camote, by Region: 2012-2016	105
45.1	Volume of Production for Taro/Gabi, by Region: 2012-2016	106
45.2	Area Harvested for Taro/Gabi, by Region: 2012-2016	106
46.1	Volume of Production for Tomato, by Region: 2012-2016	107
46.2	Area Planted for Tomato, by Region: 2012-2016	107
47.1	Volume of Production for White/Irish Potato, by Region: 2012-2016	108
47.2	Area Harvested for White/Irish Potato, by Region: 2012-2016	108
48.1	Volume of Production for Greater Yam/Ubi, by Region: 2012-2016	109
48.2	Area Harvested for Greater Yam/Ubi, by Region: 2012-2016	109

BACKGROUND

Scope and Coverage

Crops statistics are generated for 17 regions (including Negros Island Region for 2016). The Palay and Corn Production Survey (PCPS) is the source of data for cereals (palay and corn), while the Crops Production Survey (CrPS) is for all crops other than palay and corn. Around 300 crops are covered by these surveys. For this publication, information on 47 crops are reported. These crops are:

Commodity Grouping	Major Crops	Other Crops
Cereals	Palay, corn	
Fruit Crops	Banana, calamansi, mango, pineapple	Durian, lanzones, mandarin, mangosteen, orange, papaya, rambutan, tamarind, watermelon
Non-Food and Industrial Crops	Abaca, coconut, coffee, rubber, sugarcane, tobacco	Cacao, cashew, oil palm
Vegetables and Rootcrops	Cabbage, cassava, eggplant, garlic, mung bean/mongo, onion, peanut, sweet potato, tomato	Asparagus, broccoli, carrots, cauliflower, ginger, bottle gourd, snap beans/habichuelas, lettuce, lady's finger/okra, Chinese pechay, native pechay, taro/gabi, white/Irish potato, greater yam/ubi

Sampling Methodology

The sampling design of the PCPS uses the results of 1991 Census of Agriculture (CAF) as the sampling frame. The survey domain is the province. It employs a replicated two-stage stratified sampling design. The barangay is the primary sampling unit, which was selected using probability proportional to size scheme. The farming household serves as the secondary sampling unit, which was selected systematically.

A non-probability survey is employed for the CrPS. A "5 by 5" design was used in the selection of samples, with the province being the survey domain. The top five (5) producing municipalities of a certain crop are chosen from each province. From each of these municipalities, five (5) sample farmers are selected as respondents. In this two-stage design, the municipalities serves as the primary sampling units while the farmers are the secondary sampling unit.

Data Collection

For PCPS, data collection is conducted quarterly during the first 12 days of the month after the reference quarter. For CrPS, data collection is also conducted quarterly, during the last ten (10) days of the middle month of the quarter. Both surveys gather data on production and area planted/harvested. For CrPS, data on the number of bearing trees/hills are included.

Data Review and Validation

Data review and validations are conducted quarterly to ascertain the accuracy of the data produced by the surveys. The data review and validation process starts at the Provincial Statistics Office (PO), after the data processing. All provincial estimates undergo further data review and validations at the regional level, conducted by personnel at the Regional Statistical Services Office (RSSO).

All validated provincial and regional estimates are submitted to the Crops Statistics Division (CSD) for final review which is conducted during the National Data Review (NDR). Consultations and discussions between representatives from the RSSO and personnel from the CSD are held before officially releasing the statistics.

Concepts and Definitions

The following concepts and definitions are used in the generation of statistics for crops.

Area Harvested – actual area from which harvests are realized. This excludes crop area which were totally damaged. It may be smaller than the area planted. In crops statistics, this applies to temporary crops.

Area Planted – actual physical area planted. This generally applies to area reported for permanent crops and multi-harvest temporary crops.

Bearing Trees/Hills – number of trees/hills where harvesting has been made in the past and may or may not have borne fruits (productive) during the reference period due to cyclical production pattern of the crop. Hills applies to banana.

Crop Production – the quantity produced and actually harvested for a particular crop during the reference period. It includes those harvested but damaged, stolen, given away, consumed, given as harvester's share, reserved, etc. Excluded are those produced but not harvested due to low price, lack of demand and force majeure or fortuitous events, etc.

Effective Area Harvested – the actual area which is counted as many times as it was planted and harvested to same crops during the reference period. This concept applies to the harvest area reported for mono harvest temporary crops such as rice, corn, root crops and tubers, and pechay.

High Yielding Variety – an improved cultivated variety with significantly higher yield and better quality under specific environment and improved farming conditions and practices than the traditional seed varieties being used; any agricultural crop variety that can equal or exceed the yield of the current commercially grown variety in a particular locality. HYV may be locally or foreign bred.

Industrial Crops – crops that are used as inputs to other industries.
Examples are: rubber, castor beans, abaca, and oil palm.

Irrigated Palay – palay crop which receives irrigation water during its development. Irrigation may be available through artificial means such as gravity, force, power pumps, etc. It is not solely confined to lowland but also to high places where paddies are built for planting rice.

Major Crops – 21 crops in the Philippines which collectively account for more than 60 percent of the total crop production. These include palay, corn, banana, calamansi, mango, pineapple, abaca, coffee, coconut, rubber, sugarcane, tobacco, cabbage, cassava, eggplant, garlic, mungbean/mongo, onion, peanut, sweet potato, and tomato.

Minor Crops – all remaining crops other than the major crops. This group accounts for about 40 percent of the total crop production.

Non-Food Crops – are crops other than those used for food consumption. These are crops grown for their aesthetic values such as ornamental plants and cutflowers. These also include agriculture-derived products such as rice hay and coconut leaves.

Permanent/Perennial Crops – are crops which occupy the land for long period and do not need to be replaced after each harvest such as fruit trees, shrubs, nuts, etc. These crops may be productive or fruit-bearing crops.
Examples are: avocado, coffee, coconut and other fruit trees.

Priority Crops – identified national banner crops and various regional priority crops of the then Key Commercial Crops Development Program (KCCDP), High Value Crops Development Program (HVCDP), and now the Key Commodity Road Maps of the Department of Agriculture, which are being developed because of its industrial and commercial potentials.

Highlights

Crops Statistics of the Philippines
2012 - 2016

Cereals

Crops Statistics of the Philippines
2012 - 2016

Fruit Crops

Crops Statistics of the Philippines
2012 - 2016

From 2012 to 2016, both rambutan and lanzones production increased annually at average rates of 3.3 and 29.9 percent, respectively, while mangosteen production decreased at 3.7 percent per annum (Figure 25).

The production of rambutan decreased in 2016 from 8.72 thousand m.t. in 2015 to 7.67 thousand m.t. Likewise, lanzones production also declined in 2016 from 20.81 thousand m.t. in 2015 to 17.16 thousand m.t.

Both decreases were attributed to the prolonged effect of dry spell which resulted to cyclical variation of fruiting on the first semester of the year in Northern Mindanao (Camiguin) and Zamboanga Peninsula. Moreover, lesser harvest was reported in ARMM due to ongoing military operations. Lean season for fruit bearing trees was also noted in the region.

Crops Statistics of the Philippines
2012 - 2016

Non-Food and Industrial Crops

Crops Statistics of the Philippines 2012 - 2016

Of all the coffee varieties, robusta coffee registered the biggest production at 47.30 thousand m.t. or a share of 68.7 percent. Arabica coffee followed with 16.76 thousand m.t., excelsa coffee with 4.27 thousand m.t., and liberica coffee with 0.50 thousand m.t. (Figure 32).

SOCCSKSARGEN was the top producer of robusta coffee in 2016 with a production of 14.03 thousand m.t. or a share of 29.7 percent to the national total. This was followed by Davao Region with 7.68 thousand m.t. and ARMM with 7.20 thousand m.t.

Crops Statistics of the Philippines
2012 - 2016

Of the total production of tobacco in 2016, Virginia variety posted the biggest contribution of 56.0 percent. Other varieties (mostly burley) followed with 33.8 percent while native variety shared 10.2 percent (Figure 39). Ilocos Region recorded the highest Virginia variety production in 2016 at 28.34 thousand m.t. accounting for 89.7 percent of the country's total production of the particular tobacco variety.

Crops Statistics of the Philippines
2012 - 2016

Vegetables and Rootcrops

GARLIC

Garlic production grew at an average annual rate of 6.0 percent, from 8.81 thousand m.t. in 2012 to 10.42 thousand m.t. in 2015. However, in 2016, production of garlic dropped to 7.47 thousand m.t. or by 28.3 percent from its 2015 level (Figure 48). The decrease was associated with smaller bulbs harvested in Ilocos Region (Ilocos Norte) due to rainshowers during bulb formation. In MIMAROPA (Occidental Mindoro), lower production was caused by lesser area planted due to the anticipation of El Niño.

In 2016, area harvested to garlic was 2.65 thousand hectares, down by 3.5 percent from the 2015 level of 2.74 thousand hectares.

Ilocos Region topped all the garlic producing regions with 4.49 thousand m.t. and shared 60.1 percent of the 2016 total output. This was followed by MIMAROPA with 24.3 percent (Figure 49).
